

Black Boxes for Solar Turbines.... Think that these are **obsolete?** Think Again!

Continental Controls Corporation originally designed and built these controls more than 25 years ago.

Today, we continue to manufacture every black box ever built. Don't settle for rebuilt or counterfeit models made with inferior parts or with poor quality control. We use only military grade components and we stress the parts with rigorous environmental testing for improved reliability.

Call your local Solar Turbines field office for a price quote on even the most difficult to find black boxes.
