

New Emissions Standards for Small Engines Too?

Help!

Time to Call Continental Controls – The Emissions Control Specialists

Now even small engines must meet new federal and local emissions standards, and Continental Controls has just the answer: EGC 2 for engines in the 40-300 hp range. The experts at Continental Controls can help you design a complete solution for all your engines – large and small – using a range of powerful components that provide guaranteed lower emissions* AND fuel savings:

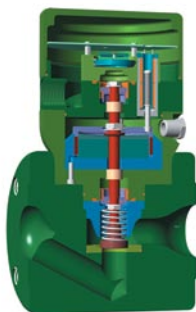

EGC 2

*Emissions control
for small engines*

EGC 2 and ECV 5 Emissions Control Valves

are the most advanced air/fuel controllers available today. Their patented variable pressure controls provide faster reactions to changes in load, air temperature and BTU values, ensuring maximum efficiency and minimum emissions.

* Engine must be in good mechanical condition and the catalytic converter operating correctly.

ECV 5

*Advanced control
for large engines*

Carburetor Replacements

provide better mixing and a more precise air/fuel mix at all loads. Our Mixing Venturi and Mixing Venturi Inserts are available for all leading gas engine carburetors – no more moving parts and no maintenance!

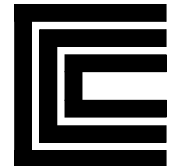

**Mixing Venturi
Inserts**

*Simple installation
and setup*

What Are You Waiting For?

Tighter emissions standards are here to stay. Make sure your engines are in compliance, and enjoy greater performance and fuel savings. Call today!
